

Type 2 Diabetes Pilot Trial

The Pilot Trial aims to assess CDMiQ's ability to support individuals with T2D. In particular; how easy individuals find it is to use, understand and navigate the CDMiQ platform; how effective CDMiQ is at capturing, scoring and displaying individual health outcome data against T2D optimum treatment guidelines and concurrent chronic disease risk factors; how useful CDMiQ is as a dashboard in supporting individuals, by providing their entire treatment access to a live, web enabled dashboard, which allows for greater understanding and improved decision making.

IPCium and Foot Factor Podiatry are seeking participants with T2D for the current CDMiQ Pilot Trial

CDMiQ Platform is a unique digitally integrated health outcome tool & dashboard, able to quantify, qualify & compare clinical health data against, T2D Optimum Treatment Guidelines & individual risk factors for developing diabetes related comorbidities, in a way not previously achieved.

- Participation in the Pilot Trial may help you with improved insights around the management of your T2D
- Participating in the Pilot Trial may help your healthcare team with improved insights around the management of your T2D
- Participation in the Pilot Trial is free and does not require a significant time commitment

Pilot Trial Benefits

Access to a Uniquely Advanced Platform

Patients and their treatment team are provided access to an industry leading digital health toolkit and live dashboard reporting ecosystem, providing invaluable insights into personal health information.

Improved Understanding of T2D Management

CDMiQ supports awareness and understanding of how individual T2D treatment plans align with the gold-standard for Diabetes care (Royal Australian College of General Practitioners (RACGP) Optimal Treatment Guidelines (OTG) - in partnership with Diabetes Australia).

Contribute to Advancements in T2D Management

Your healthcare team is provided with concise and detailed results of your current T2D Management, including: risk factors, optimum treatment guideline adherence and T2D disease management understanding and capability.

Evidence Based T2D Knowledge Centre

Access to evidence based T2D information specifically curated to support improvements across all aspects of T2D disease management, risk factors and optimum treatment guidelines, including the opportunity to participate in IPCiUM's next phase of CDMiQ's Platform testing.
